

Cloud Storage App

This file lives in the demo account you just opened.

What you can try here:

- Upload a file. Images are routed to Cloudinary, everything else to Cloudflare R2 or Supabase Storage.
- Open a file and create a share link. It expires in 7 days and can be revoked from the same screen.
- Watch the storage meter. The quota is enforced server-side when an R2 upload URL is signed.
- Visit Plans. Stripe runs in test mode, so card 4242 4242 4242 4242 upgrades without charging you.

This account is yours alone and is deleted after 24 hours.
